

An incorrect visibility restriction was specified.

Erroneous code example:

```
mod foo {  
    pub(foo) struct Bar {  
        x: i32  
    }  
}
```

To make struct `Bar` only visible in module `foo` the `in` keyword should be used:

```
mod foo {  
    pub(in crate::foo) struct Bar {  
        x: i32  
    }  
}  
  
# fn main() {}
```

For more information see the Rust Reference on [Visibility](#).
