

# Steps

**Steps** is a navigation bar that guides users through the steps of a task.

## When To Use

When a given task is complicated or has a certain sequence in the series of subtasks, we can decompose it into several steps to make things easier.

## API

```
<Steps>
  <Step title="first step" />
  <Step title="second step" />
  <Step title="third step" />
</Steps>
```

## Steps

The whole of the step bar.

Property	Description	Type	Default	Version
className	Additional class to Steps	string	-	
current	To set the current step, counting from 0. You can overwrite this state by using <b>status</b> of <b>Step</b>	number	0
