- Do not crash if cache file is invalid JSON. ([#13](#)) - [87beaa6](#), [Roy Riojas](<https://github.com/Roy> Riojas), 19/12/2016 18:03:35

Fixes [#12](#)

Not sure under which situations a cache file might exist that does not contain a valid JSON structure, but just in case to cover the possibility of this happening a try catch block has been

added

If the cache is somehow not valid the cache will be discarded and a new cache will be stored instead

As mentioned in <https://github.com/WebReflection/circular-json/issues/25> `circular-json` wasn't rightly implementing the license field.

Latest version bump changed only that bit so that ESLint should now be happy.
