

git-flow (AVH Edition) plugin

This plugin adds completion for the git-flow (AVH Edition). The AVH Edition of the git extensions that provides high-level repository operations for Vincent Driessen's branching model.

To use it, add `git-flow-avh` to the plugins array in your zshrc file:

```
plugins=(... git-flow-avh)
```

Requirements

1. The git-flow tool has to be installed separately.
2. You have to use zsh's git completion instead of the git project's git completion. This is typically done by default so you don't need to do anything else. If you installed git with Homebrew you might have to uninstall the git completion it's bundled with.
