

## kubectx - show active kubectl context

This plugin adds `kubectx_prompt_info()` function. It shows name of the active kubectl context (`kubectl config current-context`).

You can use it to customize prompt and know if You are on prod cluster ;)

*Example.* Add to `.zshrc`:

```
RPS1='${kubectx_prompt_info}'
```

### custom ctx names

One can rename default context name for better readability.

*Example.* Add to `.zshrc`:

```
kubectx_mapping[minikube]="mini"  
kubectx_mapping[context_name_from_kubeconfig]="$emoji[wolf_face]"  
kubectx_mapping[production_cluster]="%{$fg[yellow]%}prod!%{$reset_color%}"  
staging production
```
