

Docs end-to-end testing

Running locally

1. Run `yarn docs:dev` to start docs in development server.
2. Run `yarn test:e2e-website` in a separate terminal to run the test suites (`*.spec.ts`) inside `test/e2e-website` folder.

use `–headed` to run tests in headed browsers, check out Playwright CLI for more options

CI

After netlify deploy the preview site, the `netlify/functions/deploy-succeeded.js` hook calls CircleCI API to run the `e2e-website` workflow against the deployed url.
