

Netfilter Sysfs variables

/proc/sys/net/netfilter/* Variables:

`nf_log_all_netns` - BOOLEAN

- 0 - disabled (default)
- not 0 - enabled

By default, only `init_net` namespace can log packets into kernel log with LOG target; this aims to prevent containers from flooding host kernel log. If enabled, this target also works in other network namespaces. This variable is only accessible from `init_net`.
