

A raw string isn't correctly terminated because the trailing `#` count doesn't match its leading `#` count.

Erroneous code example:

```
let dolphins = r##"Dolphins!"; // error!
```

To terminate a raw string, you have to have the same number of `#` at the end as at the beginning. Example:

```
let dolphins = r#"Dolphins!"; // One `#` at the beginning, one at the end so  
                               // all good!
```
