

## changes log

### 7.3.0

- Add `subset(r1, r2)` method to determine if `r1` range is entirely contained by `r2` range.

### 7.2.3

- Fix handling of `includePrerelease` mode where version ranges like `1.0.0 - 2.0.0` would include `3.0.0-pre` and not `1.0.0-pre`.

### 7.2.2

- Fix bug where `2.0.0-pre` would be included in `^1.0.0` if `includePrerelease` was set to `true`.

### 7.2.0

- Add `simplifyRange` method to attempt to generate a more human-readable range expression that is equivalent to a supplied range, for a given set of versions.

### 7.1.2

- Remove fancy lazy-loading logic, as it was causing problems for webpack users.

### 7.1.0

- Add `require('semver/preload')` to load the entire module without using lazy getter methods.

### 7.0.0

- Refactor module into separate files for better tree-shaking
- Drop support for very old node versions, use `const/let`, `=>` functions, and classes.

### 6.3.0

- Expose the token enum on the exports

### 6.2.0

- Coerce numbers to strings when passed to `semver.coerce()`
- Add `rtl` option to coerce from right to left

### 6.1.3

- Handle X-ranges properly in includePrerelease mode

### 6.1.2

- Do not throw when testing invalid version strings

### 6.1.1

- Add options support for semver.coerce()
- Handle undefined version passed to Range.test

### 6.1.0

- Add semver.compareBuild function
- Support \* in semver.intersects

## 6.0

- Fix intersects logic.

This is technically a bug fix, but since it is also a change to behavior that may require users updating their code, it is marked as a major version increment.

## 5.7

- Add minVersion method

## 5.6

- Move boolean loose param to an options object, with backwards-compatibility protection.
- Add ability to opt out of special prerelease version handling with the includePrerelease option flag.

## 5.5

- Add version coercion capabilities

## 5.4

- Add intersection checking

## 5.3

- Add minSatisfying method

## 5.2

- Add `prerelease(v)` that returns prerelease components

## 5.1

- Add Backus-Naur for ranges
- Remove excessively cute inspection methods

## 5.0

- Remove AMD/Browserified build artifacts
- Fix `ltr` and `gtr` when using the `*` range
- Fix for range `*` with a prerelease identifier
