

Directory contents

The Dart files and golden master `.expect` files in this directory are used to test the `dart fix` framework refactorings used by the Flutter framework.

See the `flutter/packages/flutter/lib/fix_data.yaml` file for the current package:flutter data driven fixes.

To run these tests locally, execute this command in the `flutter/packages/flutter/test_fixes` directory.

```
dart fix --compare-to-golden
```

For more documentation about this folder, see <https://dart.dev/go/data-driven-fixes#test-folder>.

When making structural changes to this directory

Note that the tests in this directory are also invoked from external repositories. Specifically, the CI system for the `dart-lang/sdk` repo runs these tests in order to ensure that changes to the `dart fix` file format do not break Flutter.

See `tools/bots/flutter/analyze_flutter_flutter.sh` for where the tests are invoked.

When possible, please coordinate changes to this directory that might affect the `analyze_flutter_flutter.sh` script.
