

NgDevtoolsBackend

This library was generated with Angular CLI version 8.0.0.

Code scaffolding

Run `ng generate component component-name --project ng-devtools-backend` to generate a new component. You can also use `ng generate directive|pipe|service|class|guard|interface|enum --project ng-devtools-backend`. > Note: Don't forget to add `--project ng-devtools-backend` or else it will be added to the default project in your `angular.json` file.

Build

Run `ng build ng-devtools-backend` to build the project. The build artifacts will be stored in the `dist/` directory.

Publishing

After building your library with `ng build ng-devtools-backend`, go to the dist folder `cd dist/ng-devtools-backend` and run `npm publish`.

Running unit tests

Run `ng test ng-devtools-backend` to execute the unit tests via Karma.

Further help

To get more help on the Angular CLI use `ng help` or go check out the Angular CLI README.
