argp

Pointer to struct `:c:type:`v4l2_input``.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v4l\[linux-master] [Documentation] [userspace-api] [media] [v4l]vidioc-enuminput.rst, line 29); [backlink](#)

Description

To query the attributes of a video input applications initialize the `index` field of struct `:c:type:`v4l2_input`` and call the `ref`VIDIOC_ENUMINPUT`` with a pointer to this structure. Drivers fill the rest of the structure or return an `EINVAL` error code when the index is out of bounds. To enumerate all inputs applications shall begin at index zero, incrementing by one until the driver returns `EINVAL`.

- * - `_u32`
- ```index```
- Identifies the input, set by the application.
- * - `_u8`
- ```name``\ [32]`
- Name of the video input, a NUL-terminated ASCII string, for example: "Vin (Composite 2)". This information is intended for the user, preferably the connector label on the device itself.
- * - `_u32`
- ```type```
- Type of the input, see :ref:`input-type`.
- * - `_u32`
- ```audioset```
- Drivers can enumerate up to 32 video and audio inputs. This field shows which audio inputs were selectable as audio source if this was the currently selected video input. It is a bit mask. The LSB corresponds to audio input 0, the MSB to input 31. Any number of bits can be set, or none.

When the driver does not enumerate audio inputs no bits must be set. Applications shall not interpret this as lack of audio support. Some drivers automatically select audio sources and do not enumerate them since there is no choice anyway.

For details on audio inputs and how to select the current input see :ref:`audio`.

- * - `_u32`
- ```tuner```
- Capture devices can have zero or more tuners (RF demodulators). When the ```type``` is set to ```V4L2_INPUT_TYPE_TUNER``` this is an RF connector and this field identifies the tuner. It corresponds to struct `:c:type:`v4l2_tuner`` field ```index```. For details on tuners see :ref:`tuner`.
- * - :ref:`v4l2_std_id` <v4l2-std-id>
- ```std```
- Every video input supports one or more different video standards. This field is a set of all supported standards. For details on video standards and how to switch see :ref:`standard`.
- * - `_u32`
- ```status```
- This field provides status information about the input. See :ref:`input-status` for flags. With the exception of the sensor orientation bits ```status``` is only valid when this is the current input.

- * - `_u32`
 - `capabilities``
 - This field provides capabilities for the input. See `:ref:input-capabilities`` for flags.
- * - `_u32`
 - `reserved`` [3]
 - Reserved for future extensions. Drivers must set the array to zero.

     - 1
     - This input uses a tuner (RF demodulator).
   * - ``V4L2_INPUT_TYPE_CAMERA``
     - 2
     - Any non-tuner video input, for example Composite Video,
       S-Video, HDMI, camera sensor. The naming as ``_TYPE_CAMERA`` is historical,
       today we would have called it ``_TYPE_VIDEO``.
   * - ``V4L2_INPUT_TYPE_TOUCH``
