

# mobile-experience

[Source code of released version](#) | [Source code of development version](#)

---

A set of Cordova/PhoneGap-specific packages that set some good defaults when building for mobile. These packages only activate when you are building a native Android or iOS app.

1. [mobile-status-bar](#) - avoid the status bar information covering up your app content
2. [launch-screen](#) - cover the app with a launch image so that people don't have to see things loading
