

## Battery Plugin

This plugin adds some functions you can use to display battery information in your custom theme.

To use, add `battery` to the list of plugins in your `.zshrc` file:

```
plugins=(... battery)
```

Then, add the `battery_pct_prompt` function to your custom theme. For example:

```
R_PROMPT='${battery_pct_prompt} ...'
```

## Requirements

- On Linux, you must have the `acpi` or `acpitool` commands installed on your operating system. On Debian/Ubuntu, you can do that with `sudo apt install acpi` or `sudo apt install acpitool`.
- On Android (via Termux), you must have:

1. The `Termux:API` addon app installed: [Google Play](#) | [F-Droid](#)
2. The `termux-api` package installed within termux:

```
pkg install termux-api
```
