

Jotai example

This example shows how to integrate [Jotai](#) in Next.js.

- Jotai is a primitive and flexible state management library for React.
- Jotai is TypeScript oriented and aims to expose a minimalistic API for dealing with state in a data-flow graph way.
- Jotai uses the `useHydrateAtoms` hook to hydrate the value of an atom, for values that come from the server.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-jotai with-jotai-app
# or
yarn create next-app --example with-jotai with-jotai-app
# or
pnpm create next-app -- --example with-jotai with-jotai-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
