

zh-CN

渲染在当前 dom 里。自定义容器，查看 `getContainer` 。

en-US

Render in current dom. custom container, check `getContainer` .

```
import { Drawer, Button } from 'antd';

class App extends React.Component {
  state = { visible: false };

  showDrawer = () => {
    this.setState({
      visible: true,
    });
  };

  onClose = () => {
    this.setState({
      visible: false,
    });
  };

  render() {
    return (
      <div className="site-drawer-render-in-current-wrapper">
        Render in this
        <div style={{ marginTop: 16 }}>
          <Button type="primary" onClick={this.showDrawer}>
            Open
          </Button>
        </div>
        <Drawer
          title="Basic Drawer"
          placement="right"
          closable={false}
          onClose={this.onClose}
          visible={this.state.visible}
          getContainer={false}
          style={{ position: 'absolute' }}
        >
          <p>Some contents...</p>
        </Drawer>
      </div>
    );
  }
}

export default () => <App />;
```

```
.site-drawer-render-in-current-wrapper {  
  position: relative;  
  height: 200px;  
  padding: 48px;  
  overflow: hidden;  
  text-align: center;  
  background: #fafafa;  
  border: 1px solid #ebedf0;  
  border-radius: 2px;  
}
```
