

Home > puppeteer > ExecutionContext

ExecutionContext class

This class represents a context for JavaScript execution. A [Page] might have many execution contexts: - each frame has “default” execution context that is always created after frame is attached to DOM. This context is returned by the `Frame.executionContext()` method. - Extension’s content scripts create additional execution contexts.

Besides pages, execution contexts can be found in workers.

Signature:

```
export declare class ExecutionContext
```

Remarks

The constructor for this class is marked as internal. Third-party code should not call the constructor directly or create subclasses that extend the `ExecutionContext` class.

Methods

Method	Modifiers	Description
<code>evaluate(pageFunction, args)</code>		
<code>evaluateHandle(pageFunction, args)</code>		
<code>frame()</code>		
<code>queryObjects(prototypeHandle)</code>		This method iterates the JavaScript heap and finds all the objects with the given prototype.
