

Home > puppeteer > Browser > wsEndpoint

Browser.wsEndpoint() method

The browser websocket endpoint which can be used as an argument to `Puppeteer.connect()`.

Signature:

```
wsEndpoint(): string;
```

Returns:

string

The Browser websocket url.

Remarks

The format is `ws://${host}:${port}/devtools/browser/<id>`.

You can find the `websocketDebuggerUrl` from `http://${host}:${port}/json/version`.
