

Go To Line package

Move the cursor to a specific line in the editor using ctrl-g.

The screenshot shows a code editor with a file named 'go-to-line-view.coffee'. The code defines a class 'GoToLineView' that extends 'View'. It has an '@activate' method that creates a new 'GoToLineView' instance and a '@content' method that defines a 'div' with a 'go-to-line overlay from-top mini' class. The 'div' contains a 'miniEditor' subview and a 'message' outlet. A dialog box is open over the code, prompting the user to 'Enter a line number 1-67'.

```
1  {$, EditorView, Point, View}
2
3  module.exports =
4  class GoToLineView extends View
5    @activate: -> new GoToLineView
6
7    @content: ->
8      @div class: 'go-to-line overlay from-top mini', =>
9        @subview 'miniEditor', new EditorView(mini: true)
10       @div class: 'message', outlet: 'message'
```
