

# With react-toolbox example

This is a simple example of getting react-toolbox up and running, using [react-toolbox-themr](#).

For actual use, you probably also want to add Roboto Font, and Material Design Icons. See <http://react-toolbox.io/#/install>

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-react-toolbox with-react-toolbox-app
# or
yarn create next-app --example with-react-toolbox with-react-toolbox-app
# or
pnpm create next-app -- --example with-react-toolbox with-react-toolbox-app
```

Notice that `yarn toolbox` (or `npm run toolbox`) should be rerun every time the `"reactToolbox"` configuration in `package.json` is changed, in order to update `/theme.js` and `public/theme.css`. The `"reactToolbox"` configuration includes styling, and the list of react-toolbox components to include.

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
