

Flutter reports data to two separate systems:

1. Anonymous usage statistics are reported to Google Analytics (for statistics such as the number of times the `flutter` tool was run within a given time period). The code that manages this is in `[usage.dart]`.
2. Crash reports for the `flutter` tool. These are not reports of when Flutter applications crash, but rather when the command-line `flutter` tool itself crashes. The code that manages this is in `[crash_reporting.dart]`.

## Opting out

Users can opt out of all reporting in a single place by running `flutter config --no-analytics` .
