Legacy panel plugins

Panels are the main building blocks of dashboards.

Panel development

Scrolling

The grafana dashboard framework controls the panel height. To enable a scrollbar within the panel the `PanelCtrl` needs to set the `scrollable` static variable:

```
export class MyPanelCtrl extends PanelCtrl {  
  static scrollable = true;  
  ...  
}
```

In this case, make sure the template has a single `<div>...</div>` root. The plugin loader will modify that element adding a scrollbar.

Examples

- clock-panel
- singlestat-panel
