使用 Steps 的 `status` 属性来指定当前步骤的状态。

en-US

By using `status` of `Steps`, you can specify the state for current step.

```
import { Steps } from 'antd';

const { Step } = Steps;

export default () => (
  <Steps current={1} status="error">
    <Step title="Finished" description="This is a description" />
    <Step title="In Process" description="This is a description" />
    <Step title="Waiting" description="This is a description" />
  </Steps>
);
```
