

## zh-CN

带有搜索按钮的输入框。

## en-US

Example of creating a search box by grouping a standard input with a search button.

```
import { Input, Space } from 'antd';
import { AudioOutlined } from '@ant-design/icons';

const { Search } = Input;

const suffix = (
  <AudioOutlined
    style={{
      fontSize: 16,
      color: '#1890ff',
    }}
  />
);

const onSearch = value => console.log(value);

export default () => (
  <Space direction="vertical">
    <Search placeholder="input search text" onSearch={onSearch} style={{ width: 200 }} />
    <Search placeholder="input search text" allowClear onSearch={onSearch} style={{ width: 200 }} />
    <Search
      addonBefore="https://"
      placeholder="input search text"
      allowClear
      onSearch={onSearch}
      style={{ width: 304 }}
    />
    <Search placeholder="input search text" onSearch={onSearch} enterButton />
    <Search
      placeholder="input search text"
      allowClear
      enterButton="Search"
      size="large"
      onSearch={onSearch}
    />
    <Search
      placeholder="input search text"
      enterButton="Search"
      size="large"
      suffix={suffix}
      onSearch={onSearch}
    />
  </Space>
);
```

```
    />  
  </Space>  
);
```
