

API routes with middleware

Next.js ships with [API routes](#), which provide an easy solution to build your own `API`. This example shows how to implement simple `middleware` to wrap around your `API` endpoints.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example api-routes-middleware api-routes-middleware-app
# or
yarn create next-app --example api-routes-middleware api-routes-middleware-app
# or
pnpm create next-app -- --example api-routes-middleware api-routes-middleware-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
