

Thank you for making Clippy better!

We’re collecting our changelog from pull request descriptions. If your PR only includes internal changes, you can just write **changelog: none**. Otherwise, please write a short comment explaining your change. Also, it’s helpful for us that the lint name is put into brackets `[]` and backticks `` ``, e.g. `[`lint_name`]`.

If your PR fixes an issue, you can add “fixes #issue_number” into this PR description. This way the issue will be automatically closed when your PR is merged.

If you added a new lint, here’s a checklist for things that will be checked during review or continuous integration.

- ☐ Followed lint naming conventions
- ☐ Added passing UI tests (including committed `.stderr` file)
- ☐ `cargo test` passes locally
- ☐ Executed `cargo dev update_lints`
- ☐ Added lint documentation
- ☐ Run `cargo dev fmt`

Note that you can skip the above if you are just opening a WIP PR in order to get feedback.

Delete this line and everything above before opening your PR.

Please write a short comment explaining your change (or “none” for internal only changes)
