

Digital TV Demux Device

The Digital TV demux device controls the MPEG-TS filters for the digital TV. If the driver and hardware supports, those filters are implemented at the hardware. Otherwise, the Kernel provides a software emulation.

It can be accessed through `/dev/adapter?/demux?`. Data types and ioctl definitions can be accessed by including `linux/dvb/dmx.h` in your application.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\dvb\[linux-master] [Documentation] [userspace-api] [media] [dvb]demux.rst, line 19)
