

Starter for creating a Gatsby Theme workspace

```
gatsby new my-theme https://github.com/gatsbyjs/gatsby-starter-theme-workspace
cd my-theme
yarn workspace example develop
```

Layout

```
.
├─ README.md
├─ gatsby-theme-minimal
│   ├─ README.md
│   ├─ gatsby-config.js
│   ├─ index.js
│   └─ package.json
├─ example
│   ├─ README.md
│   ├─ gatsby-config.js
│   ├─ package.json
│   └─ src
├─ package.json
└─ yarn.lock
```

3 directories, 10 files

gatsby-theme-minimal

This directory is the theme package itself. You should rename this at some point to be `gatsby-theme-{my-theme-name}`. Also change the `package.json` name field and the corresponding dependency in the example directory's `package.json` / `gatsby-config.js` to match the chosen name.

- `gatsby-theme-minimal/`
 - `gatsby-config.js` : An empty gatsby-config that you can use as a starting point for building functionality into your theme.
 - `index.js` : Since themes also function as plugins, this is an empty file that gatsby needs to use this theme as a plugin.
 - `package.json` : The dependencies that your theme will pull in when people install it. `gatsby` should be a `peerDependency`.

example

This is an example usage of your theme. It should look the same as the site of someone who installed and used your theme from npm.

- `example/`
 - `gatsby-config.js` : Specifies which theme to use and any other one-off config a site might need.
 - `src/` : Source code such as one-off pages or components that might live in a user's site.

You can run the example with:

```
yarn workspace example develop
```
