

zh-CN

使用 `optionLabelProp` 指定回填到选择框的 `Option` 属性。

en-US

Specify the prop name of Option which will be rendered in select box.

```
import { Select } from 'antd';

const { Option } = Select;

function handleChange(value) {
  console.log(`selected ${value}`);
}

export default () => (
  <Select
    mode="multiple"
    style={{ width: '100%' }}
    placeholder="select one country"
    defaultValue={['china']}
    onChange={handleChange}
    optionLabelProp="label"
  >
    <Option value="china" label="China">
      <div className="demo-option-label-item">
        <span role="img" aria-label="China">
          CN
        </span>
        China (中国)
      </div>
    </Option>
    <Option value="usa" label="USA">
      <div className="demo-option-label-item">
        <span role="img" aria-label="USA">
          US
        </span>
        USA (美国)
      </div>
    </Option>
    <Option value="japan" label="Japan">
      <div className="demo-option-label-item">
        <span role="img" aria-label="Japan">
          JP
        </span>
        Japan (日本)
      </div>
    </Option>
    <Option value="korea" label="Korea">
      <div className="demo-option-label-item">
```

```
        <span role="img" aria-label="Korea">
            KR
        </span>
        Korea (韩国)
    </div>
</Option>
</Select>
);
```

```
.demo-option-label-item > span {
    margin-right: 6px;
}
```
