

media ioctl()

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\mediactl\[linux-master] [Documentation] [userspace-api] [media] [mediactl]media-func-ioctl.rst, line 2)

Unknown directive type "c.namespace".

```
.. c:namespace:: MC
```

Name

media-ioctl - Control a media device

Synopsis

```
#include <sys/ioctl.h>
```

```
int ioctl(int fd, int request, void *argp)
```

Arguments

`fd`

File descriptor returned by `c:func:'open()'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\mediactl\[linux-master] [Documentation] [userspace-api] [media] [mediactl]media-func-ioctl.rst, line 28); [backlink](#)

Unknown interpreted text role "c:func".

`request`

Media ioctl request code as defined in the media.h header file, for example MEDIA_IOC_SETUP_LINK.

`argp`

Pointer to a request-specific structure.

Description

The `ref:'ioctl()' <media-func-ioctl>` function manipulates media device parameters. The argument `fd` must be an open file descriptor.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\mediactl\[linux-master] [Documentation] [userspace-api] [media] [mediactl]media-func-ioctl.rst, line 40); [backlink](#)

Unknown interpreted text role "ref".

The `ioctl request` code specifies the media function to be called. It has encoded in it whether the argument is an input, output or read/write parameter, and the size of the argument `argp` in bytes.

Macros and structures definitions specifying media ioctl requests and their parameters are located in the media.h header file. All media ioctl requests, their respective function and parameters are specified in `ref:'media-user-func'`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\mediactl\[linux-master] [Documentation] [userspace-api] [media] [mediactl]media-func-ioctl.rst, line 47); [backlink](#)

Unknown interpreted text role "ref".

Return Value

On success 0 is returned, on error -1 and the `errno` variable is set appropriately. The generic error codes are described at the

.ref: Generic Error Codes <gen-errors>` chapter.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\mediactl\[linux-master] [Documentation] [userspace-api] [media] [mediactl]media-func-ioctl.rst, line 55); *backlink*
Unknown interpreted text role "ref".

Request-specific error codes are listed in the individual requests descriptions.

When an ioctl that takes an output or read/write parameter fails, the parameter remains unmodified.
