

Minimum React Version

Why This Error Occurred Your project is using an old version of `react` or `react-dom` that does not meet the suggested minimum version requirement.

Next.js suggests using, at a minimum, `react@17.0.2` and `react-dom@17.0.2`. Older versions of `react` and `react-dom` do work with Next.js, however, they do not enable all of Next.js' features.

For example, the following features are not enabled with old React versions:

- Fast Refresh: instantly view edits to your app without losing component state
- Component stack trace in development: see the component tree that lead up to an error
- Hydration mismatch warnings: trace down discrepancies in your React tree that cause performance problems

This list is not exhaustive, but illustrative in the value of upgrading React!

Possible Ways to Fix It Via npm

```
npm upgrade react@latest react-dom@latest
```

Via Yarn

```
yarn add react@latest react-dom@latest
```

Manually Open your `package.json` and upgrade `react` and `react-dom`:

```
{
  "dependencies": {
    "react": "^17.0.2",
    "react-dom": "^17.0.2"
  }
}
```
