

# Example app with Paste and TypeScript

This example features how to use [Paste](#) as the component library within a Next.js app with [TypeScript](#).

Next.js and Paste have built-in TypeScript declarations, so you'll get autocompletion for their modules straight away.

`pages/_app.tsx` is used to connect `Paste`'s Theme Provider so the pages can have app-wide styles.

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-paste-typescript with-paste-typescript-app
# or
yarn create next-app --example with-paste-typescript with-paste-typescript-app
# or
pnpm create next-app -- --example with-paste-typescript with-paste-typescript-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
