

You can use the `.link-*` classes to colorize links. Unlike the `[.text-*` classes]({{< docsref "/utilities/colors" >}}), these classes have a `:hover` and `:focus` state.

```
{{< example >}} {{< colored-links.inline >}} {{- range (index $.Site.Data "theme-colors") }} {{.name | title }} link {{- end -}} {{< /colored-links.inline >}} {{< /example >}}
```

{{< callout info >}} Some of the link styles use a relatively light foreground color, and should only be used on a dark background in order to have sufficient contrast. {{< /callout >}}
