## FrameWaitForFunctionOptions interface

Signature:

```
export interface FrameWaitForFunctionOptions
```

### Properties

Property	Type	Description
<a href="#">polling?</a>	string   number	<i>(Optional)</i> An interval at which the <code>pageFunction</code> is executed, defaults to <code>raf</code> . If <code>polling</code> is a number, then it is treated as an interval in milliseconds at which the function would be executed. If <code>polling</code> is a string, then it can be one of the following values:- <code>raf</code> - to constantly execute <code>pageFunction</code> in <code>requestAnimationFrame</code> callback. This is the tightest polling mode which is suitable to observe styling changes.- <code>mutation</code> - to execute <code>pageFunction</code> on every DOM mutation.
<a href="#">timeout?</a>	number	<i>(Optional)</i> Maximum time to wait in milliseconds. Defaults to <code>30000</code> (30 seconds). Pass <code>0</code> to disable the timeout. Puppeteer's default timeout can be changed using <a href="#">Page.setDefaultTimeout()</a> .
