

Tableau connector for Elasticsearch

The Tableau Connector works in tandem with the Elastic JDBC driver to facilitate the query of Elasticsearch. It gives users a simple way to query Elasticsearch data from Tableau. After providing basic connection and authentication information, users can easily select Elasticsearch indices for use in Tableau Desktop and Tableau Server.

Installation

1. Tableau connector for Elasticsearch installation:

- Go to the [Connector Download](#) page.
- Download the *.taco* connector file.
- Move the *.taco* file here:
 - Windows: C:\Users[Windows User]\Documents\My Tableau Repository\Connectors
 - macOS: /Users/[user]/Documents/My Tableau Repository/Connectors

2. Elasticsearch JDBC Driver Installation:

- Go to the [Driver Download](#) page.
- Download the Elasticsearch JDBC Driver *.jar* file and move it into the following directory:
 - Windows - C:\Program Files\Tableau\Drivers
 - macOS - /Users/[user]/Library/Tableau/Drivers

3. Relaunch Tableau and connect with *Elasticsearch by Elastic*.
