

Internationalized Routing

This example shows how to create internationalized pages using Next.js and the `i18n` routing feature. It shows a normal page, a non-dynamic `getStaticProps` page, a dynamic `getStaticProps` page, and a `getServerSideProps` page.

For further documentation on this feature see the [Internationalized Routing docs](#).

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example i18n-routing i18n-app
# or
yarn create next-app --example i18n-routing i18n-app
# or
pnpm create next-app -- --example i18n-routing i18n-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
