

Tracing class

The Tracing class exposes the tracing audit interface.

Signature:

```
export declare class Tracing
```

Remarks

You can use `tracing.start` and `tracing.stop` to create a trace file which can be opened in Chrome DevTools or [timeline viewer](#).

The constructor for this class is marked as internal. Third-party code should not call the constructor directly or create subclasses that extend the `Tracing` class.

Example

```
await page.tracing.start({path: 'trace.json'});
await page.goto('https://www.google.com');
await page.tracing.stop();
```

Properties

Property	Modifiers	Type	Description
_client		CDPSession	
_path		string	
_recording		boolean	

Methods

Method	Modifiers	Description
start(options)		Starts a trace for the current page.
stop()		Stops a trace started with the <code>start</code> method.
