

npm-completion

Synopsis

`npm completion`

Note: This command is unaware of workspaces.

Description

Enables tab-completion in all npm commands.

The synopsis above loads the completions into your current shell. Adding it to your `~/.bashrc` or `~/.zshrc` will make the completions available everywhere:

```
npm completion >> ~/.bashrc
```

```
npm completion >> ~/.zshrc
```

You may of course also pipe the output of `npm completion` to a file such as `/usr/local/etc/bash_completion.d/npm` or `/etc/bash_completion.d/npm` if you have a system that will read that file for you.

When `COMP_CWORD`, `COMP_LINE`, and `COMP_POINT` are defined in the environment, `npm completion` acts in “plumbing mode”, and outputs completions based on the arguments.
