

Incompatible Packages package

Displays a list of installed Atom packages that have native module dependencies that are not compatible with the current version of Atom.

 Incompatible Packages ✕

The following packages could not be loaded because they contain native modules that aren't compatible with this version of Atom.

Previous Atom versions shipped with Chrome 32 and node 0.11.10 but Atom now ships with Chrome 35 and node 0.11.13.

These packages should now ship versions of these native modules that are compatible with node 0.11.13.

Updates for these packages may already be available that resolve this issue.

If no update is available you may want to notify the package author that their package isn't supported in Atom 0.120.0-7e415ff because of the Chrome 35 and node 0.11.13 upgrade.
