

With Algolia React InstantSearch example

The goal of this example is to illustrate how you can use [Algolia React InstantSearch](#) to perform your search in an application developed with Next.js. It also illustrates how you can keep in sync the Url with the search.

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-algolia-react-instantsearch with-algolia-react-instantsearch-app
# or
yarn create next-app --example with-algolia-react-instantsearch with-algolia-react-instantsearch-app
# or
pnpm create next-app -- --example with-algolia-react-instantsearch with-algolia-react-instantsearch-app
```

To set up Algolia:

- create an [algolia](#) account or use this already [configured index](#)
- update the `appId`, `apiKey` and `indexName` you want to search on in [components/instantsearch.js](#)

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
