

unsized_tuple_coercion

The tracking issue for this feature is: [#42877](#)

This is a part of [RFC0401](#). According to the RFC, there should be an implementation like this:

```
impl<..., T, U: ?Sized> Unsized<(..., U)> for (... , T) where T: Unsized<U> {}
```

This implementation is currently gated behind `#![feature(unsized_tuple_coercion)]` to avoid insta-stability. Therefore you can use it like this:

```
#![feature(unsized_tuple_coercion)]

fn main() {
    let x : ([i32; 3], [i32; 3]) = ([1, 2, 3], [4, 5, 6]);
    let y : &([i32; 3], [i32]) = &x;
    assert_eq!(y.1[0], 4);
}
```
