

createPages benchmark

Stress tests creating lots of tiny pages.

Defaults to building a site with 5k pages. Set the `NUM_PAGES` environment variable to change that e.g. `NUM_PAGES=25000 gatsby build`

Running the benchmark

First, install node modules required by `package.json`. This is needed only one time. Then run the build

```
npm install  
npm run build
```

Alternatively;

```
NUM_PAGES=2000 yarn bench
```
