

The `not` `cfg`-predicate was malformed.

Erroneous code example:

```
#[cfg(not())] // error: expected 1 cfg-pattern
pub fn something() {}
```

```
pub fn main() {}
```

The `not` predicate expects one `cfg`-pattern. Example:

```
#[cfg(not(target_os = "linux"))] // ok!
pub fn something() {}
```

```
pub fn main() {}
```

For more information about the `cfg` attribute, read the section on Conditional Compilation in the Reference.
