

unboxed_closures

The tracking issue for this feature is [#29625](#)

See Also: [fn_traits](#)

The `unboxed_closures` feature allows you to write functions using the `"rust-call"` ABI, required for implementing the `Fn*` family of traits. `"rust-call"` functions must have exactly one (non self) argument, a tuple representing the argument list.

```
#![feature(unboxed_closures)]

extern "rust-call" fn add_args(args: (u32, u32)) -> u32 {
    args.0 + args.1
}

fn main() {}
```
