

# What's New In Python 3.10

**Release:** [|release|](#)  
**Date:** [|today|](#)  
**Editor:** Pablo Galindo Salgado

This article explains the new features in Python 3.10, compared to 3.9.

For full details, see the [ref: changelog <changelog>](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 51); [backlink](#)

Unknown interpreted text role "ref".

## Summary -- Release highlights

New syntax features:

- [PEP 634](#), Structural Pattern Matching: Specification
- [PEP 635](#), Structural Pattern Matching: Motivation and Rationale
- [PEP 636](#), Structural Pattern Matching: Tutorial
- [:issue: 12782](#), Parenthesized context managers are now officially allowed.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 67); [backlink](#)

Unknown interpreted text role "issue".

New features in the standard library:

- [PEP 618](#), Add Optional Length-Checking To zip.

Interpreter improvements:

- [PEP 626](#), Precise line numbers for debugging and other tools.

New typing features:

- [PEP 604](#), Allow writing union types as X | Y
- [PEP 613](#), Explicit Type Aliases
- [PEP 612](#), Parameter Specification Variables

Important deprecations, removals or restrictions:

- [PEP 644](#), Require OpenSSL 1.1.1 or newer
- [PEP 632](#), Deprecate distutils module.
- [PEP 623](#), Deprecate and prepare for the removal of the wstr member in PyUnicodeObject.
- [PEP 624](#), Remove Py\_UNICODE encoder APIs
- [PEP 597](#), Add optional EncodingWarning

## New Features

### Parenthesized context managers

Using enclosing parentheses for continuation across multiple lines in context managers is now supported. This allows formatting a long collection of context managers in multiple lines in a similar way as it was previously possible with import statements. For instance, all these examples are now valid:

```
with (CtxManager() as example):
    ...

with (
    CtxManager1(),
    CtxManager2()
):
    ...

with (CtxManager1() as example,
```

```

    CtxManager2():
    ...

with (CtxManager1(),
      CtxManager2() as example):
    ...

with (
    CtxManager1() as example1,
    CtxManager2() as example2
):
    ...

```

it is also possible to use a trailing comma at the end of the enclosed group:

```

with (
    CtxManager1() as example1,
    CtxManager2() as example2,
    CtxManager3() as example3,
):
    ...

```

This new syntax uses the non LL(1) capacities of the new parser. Check [PEP 617](#) for more details.

(Contributed by Guido van Rossum, Pablo Galindo and Lysandros Nikolaou in [:issue:12782](#) and [:issue:40334](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]3.10.rst, line 146); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]3.10.rst, line 146); [backlink](#)

Unknown interpreted text role "issue".

## Better error messages

### SyntaxErrors

When parsing code that contains unclosed parentheses or brackets the interpreter now includes the location of the unclosed bracket of parentheses instead of displaying *SyntaxError: unexpected EOF while parsing* or pointing to some incorrect location. For instance, consider the following code (notice the unclosed '{'):

```

expected = {9: 1, 18: 2, 19: 2, 27: 3, 28: 3, 29: 3, 36: 4, 37: 4,
            38: 4, 39: 4, 45: 5, 46: 5, 47: 5, 48: 5, 49: 5, 54: 6,
some_other_code = foo()

```

Previous versions of the interpreter reported confusing places as the location of the syntax error:

```

File "example.py", line 3
    some_other_code = foo()
                        ^
SyntaxError: invalid syntax

```

but in Python 3.10 a more informative error is emitted:

```

File "example.py", line 1
    expected = {9: 1, 18: 2, 19: 2, 27: 3, 28: 3, 29: 3, 36: 4, 37: 4,
               ^
SyntaxError: '{' was never closed

```

In a similar way, errors involving unclosed string literals (single and triple quoted) now point to the start of the string instead of reporting EOF/EOL.

These improvements are inspired by previous work in the PyPy interpreter.

(Contributed by Pablo Galindo in [:issue:42864](#) and Batuhan Taskaya in [:issue:40176](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]3.10.rst, line 192); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-

[main\Doc\whatsnew\cpython-main \[Doc\] \[whatsnew\] 3.10.rst, line 192](#); [backlink](#)

Unknown interpreted text role "issue".

`:exc: `SyntaxError`` exceptions raised by the interpreter will now highlight the full error range of the expression that constitutes the syntax error itself, instead of just where the problem is detected. In this way, instead of displaying (before Python 3.10):

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 195); [backlink](#)

Unknown interpreted text role "exc".

```
>>> foo(x, z for z in range(10), t, w)
File "<stdin>", line 1
    foo(x, z for z in range(10), t, w)
            ^
SyntaxError: Generator expression must be parenthesized
```

now Python 3.10 will display the exception as:

```
>>> foo(x, z for z in range(10), t, w)
File "<stdin>", line 1
    foo(x, z for z in range(10), t, w)
            ^^^^^^^^^^^^^^^^^^^^^^^^^
SyntaxError: Generator expression must be parenthesized
```

This improvement was contributed by Pablo Galindo in [issue: `43914`](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 218); [backlink](#)

Unknown interpreted text role "issue".

A considerable amount of new specialized messages for `:exc: `SyntaxError`` exceptions have been incorporated. Some of the most notable ones are as follows:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 220); [backlink](#)

Unknown interpreted text role "exc".

- Missing `:` before blocks:

```
>>> if rocket.position > event_horizon
File "<stdin>", line 1
    if rocket.position > event_horizon
                                ^
SyntaxError: expected ':'
```

(Contributed by Pablo Galindo in [issue: `42997`](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 233); [backlink](#)

Unknown interpreted text role "issue".

- Unparenthesised tuples in comprehensions targets:

```
>>> {x,y for x,y in zip('abcd', '1234')}
File "<stdin>", line 1
    {x,y for x,y in zip('abcd', '1234')}
      ^
SyntaxError: did you forget parentheses around the comprehension target?
```

(Contributed by Pablo Galindo in [issue: `43017`](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 245); [backlink](#)

Unknown interpreted text role "issue".

- Missing commas in collection literals and between expressions:

```
>>> items = {
... x: 1,
... y: 2
... z: 3,
  File "<stdin>", line 3
    y: 2
    ^
SyntaxError: invalid syntax. Perhaps you forgot a comma?
```

(Contributed by Pablo Galindo in [issue:43822](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 260); [backlink](#)

Unknown interpreted text role "issue".

- Multiple Exception types without parentheses:

```
>>> try:
...     build_dyson_sphere()
... except NotEnoughScienceError, NotEnoughResourcesError:
  File "<stdin>", line 3
    except NotEnoughScienceError, NotEnoughResourcesError:
        ^
SyntaxError: multiple exception types must be parenthesized
```

(Contributed by Pablo Galindo in [issue:43149](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 274); [backlink](#)

Unknown interpreted text role "issue".

- Missing : and values in dictionary literals:

```
>>> values = {
... x: 1,
... y: 2,
... z:
... }
  File "<stdin>", line 4
    z:
    ^
SyntaxError: expression expected after dictionary key and ':'

>>> values = {x:1, y:2, z w:3}
  File "<stdin>", line 1
    values = {x:1, y:2, z w:3}
                ^
SyntaxError: ':' expected after dictionary key
```

(Contributed by Pablo Galindo in [issue:43823](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 296); [backlink](#)

Unknown interpreted text role "issue".

- try blocks without except or finally blocks:

```
>>> try:
...     x = 2
...     something = 3
  File "<stdin>", line 3
    something = 3
    ^^^^^^^^^
SyntaxError: expected 'except' or 'finally' block
```

(Contributed by Pablo Galindo in [issue:44305](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 310); [backlink](#)

Unknown interpreted text role "issue".

- Usage of `=` instead of `==` in comparisons:

```
>>> if rocket.position = event_horizon:
      File "<stdin>", line 1
        if rocket.position = event_horizon:
                           ^
SyntaxError: cannot assign to attribute here. Maybe you meant '==' instead of '='?
```

(Contributed by Pablo Galindo in [issue:43797](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 322); [backlink](#)

Unknown interpreted text role "issue".

- Usage of `*` in f-strings:

```
>>> f"Black holes {all_black_holes} and revelations"
      File "<stdin>", line 1
        (*all_black_holes)
        ^
SyntaxError: f-string: cannot use starred expression here
```

(Contributed by Pablo Galindo in [issue:41064](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 334); [backlink](#)

Unknown interpreted text role "issue".

## IndentationErrors

Many `:exc:IndentationError` exceptions now have more context regarding what kind of block was expecting an indentation, including the location of the statement:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 339); [backlink](#)

Unknown interpreted text role "exc".

```
>>> def foo():
...     if lel:
...         x = 2
      File "<stdin>", line 3
        x = 2
        ^
IndentationError: expected an indented block after 'if' statement in line 2
```

## AttributeErrors

When printing `:exc:AttributeError`, `:cfunc:PyErr_Display` will offer suggestions of similar attribute names in the object that the exception was raised from:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\cpython-main [Doc] [whatsnew] 3.10.rst, line 356); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-

main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 356); [backlink](#)

Unknown interpreted text role "c:func".

```
>>> collections.namedtoplo
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
AttributeError: module 'collections' has no attribute 'namedtoplo'. Did you mean: namedtuple?
```

(Contributed by Pablo Galindo in [issue:38530](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 367); [backlink](#)

Unknown interpreted text role "issue".

### Warning

Notice this won't work if `c:func:PyErr_Display` is not called to display the error which can happen if some other custom error display function is used. This is a common scenario in some REPLs like IPython.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 370); [backlink](#)

Unknown interpreted text role "c:func".

## NameErrors

When printing `exc:NameError` raised by the interpreter, `c:func:PyErr_Display` will offer suggestions of similar variable names in the function that the exception was raised from:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 377); [backlink](#)

Unknown interpreted text role "exc".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 377); [backlink](#)

Unknown interpreted text role "c:func".

```
>>> schwarzschild_black_hole = None
>>> schwarzschild_black_hole
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
NameError: name 'schwarzschild_black_hole' is not defined. Did you mean: schwarzschild_black_hole?
```

(Contributed by Pablo Galindo in [issue:38530](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 389); [backlink](#)

Unknown interpreted text role "issue".

### Warning

Notice this won't work if `c:func:PyErr_Display` is not called to display the error, which can happen if some other custom error display function is used. This is a common scenario in some REPLs like IPython.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 392); [backlink](#)

Unknown interpreted text role "c:func".

## PEP 626: Precise line numbers for debugging and other tools

PEP 626 brings more precise and reliable line numbers for debugging, profiling and coverage tools. Tracing events, with the correct line number, are generated for all lines of code executed and only for lines of code that are executed.

The `f_lineno` attribute of frame objects will always contain the expected line number.

The `co_notab` attribute of code objects is deprecated and will be removed in 3.12. Code that needs to convert from offset to line number should use the new `co_lines()` method instead.

## PEP 634: Structural Pattern Matching

Structural pattern matching has been added in the form of a *match statement* and *case statements* of patterns with associated actions. Patterns consist of sequences, mappings, primitive data types as well as class instances. Pattern matching enables programs to extract information from complex data types, branch on the structure of data, and apply specific actions based on different forms of data.

### Syntax and operations

The generic syntax of pattern matching is:

```
match subject:
    case <pattern_1>:
        <action_1>
    case <pattern_2>:
        <action_2>
    case <pattern_3>:
        <action_3>
    case _:
        <action_wildcard>
```

A match statement takes an expression and compares its value to successive patterns given as one or more case blocks. Specifically, pattern matching operates by:

1. using data with type and shape (the `subject`)
2. evaluating the `subject` in the `match` statement
3. comparing the subject with each pattern in a `case` statement from top to bottom until a match is confirmed.
4. executing the action associated with the pattern of the confirmed match
5. If an exact match is not confirmed, the last case, a wildcard `_`, if provided, will be used as the matching case. If an exact match is not confirmed and a wildcard case does not exist, the entire match block is a no-op.

### Declarative approach

Readers may be aware of pattern matching through the simple example of matching a subject (data object) to a literal (pattern) with the switch statement found in C, Java or JavaScript (and many other languages). Often the switch statement is used for comparison of an object/expression with case statements containing literals.

More powerful examples of pattern matching can be found in languages such as Scala and Elixir. With structural pattern matching, the approach is "declarative" and explicitly states the conditions (the patterns) for data to match.

While an "imperative" series of instructions using nested "if" statements could be used to accomplish something similar to structural pattern matching, it is less clear than the "declarative" approach. Instead the "declarative" approach states the conditions to meet for a match and is more readable through its explicit patterns. While structural pattern matching can be used in its simplest form comparing a variable to a literal in a case statement, its true value for Python lies in its handling of the subject's type and shape.

### Simple pattern: match to a literal

Let's look at this example as pattern matching in its simplest form: a value, the subject, being matched to several literals, the patterns. In the example below, `status` is the subject of the match statement. The patterns are each of the case statements, where literals represent request status codes. The associated action to the case is executed after a match:

```
def http_error(status):
    match status:
        case 400:
            return "Bad request"
        case 404:
            return "Not found"
        case 418:
            return "I'm a teapot"
        case _:
            return "Something's wrong with the internet"
```

If the above function is passed a `status` of 418, "I'm a teapot" is returned. If the above function is passed a `status` of 500, the case statement with `_` will match as a wildcard, and "Something's wrong with the internet" is returned. Note the last block: the variable name, `_`, acts as a *wildcard* and insures the subject will always match. The use of `_` is optional.

You can combine several literals in a single pattern using `|` ("or"):

```
case 401 | 403 | 404:
    return "Not allowed"
```

### Behavior without the wildcard

If we modify the above example by removing the last case block, the example becomes:

```
def http_error(status):
    match status:
        case 400:
            return "Bad request"
        case 404:
            return "Not found"
        case 418:
            return "I'm a teapot"
```

Without the use of `_` in a case statement, a match may not exist. If no match exists, the behavior is a no-op. For example, if `status` of 500 is passed, a no-op occurs.

### Patterns with a literal and variable

Patterns can look like unpacking assignments, and a pattern may be used to bind variables. In this example, a data point can be unpacked to its x-coordinate and y-coordinate:

```
# point is an (x, y) tuple
match point:
    case (0, 0):
        print("Origin")
    case (0, y):
        print(f"Y={y}")
    case (x, 0):
        print(f"X={x}")
    case (x, y):
        print(f"X={x}, Y={y}")
    case _:
        raise ValueError("Not a point")
```

The first pattern has two literals, `(0, 0)`, and may be thought of as an extension of the literal pattern shown above. The next two patterns combine a literal and a variable, and the variable *binds* a value from the subject (`point`). The fourth pattern captures two values, which makes it conceptually similar to the unpacking assignment `(x, y) = point`.

### Patterns and classes

If you are using classes to structure your data, you can use as a pattern the class name followed by an argument list resembling a constructor. This pattern has the ability to capture class attributes into variables:

```
class Point:
    x: int
    y: int

def location(point):
    match point:
        case Point(x=0, y=0):
            print("Origin is the point's location.")
        case Point(x=0, y=y):
            print(f"Y={y} and the point is on the y-axis.")
        case Point(x=x, y=0):
            print(f"X={x} and the point is on the x-axis.")
        case Point():
            print("The point is located somewhere else on the plane.")
        case _:
            print("Not a point")
```

### Patterns with positional parameters

You can use positional parameters with some builtin classes that provide an ordering for their attributes (e.g. dataclasses). You can also define a specific position for attributes in patterns by setting the `__match_args__` special attribute in your classes. If it's set to `("x", "y")`, the following patterns are all equivalent (and all bind the `y` attribute to the `var` variable):

```
Point(1, var)
Point(1, y=var)
Point(x=1, y=var)
Point(y=var, x=1)
```

### Nested patterns

Patterns can be arbitrarily nested. For example, if our data is a short list of points, it could be matched like this:

```

match points:
    case []:
        print("No points in the list.")
    case [Point(0, 0)]:
        print("The origin is the only point in the list.")
    case [Point(x, y)]:
        print(f"A single point {x}, {y} is in the list.")
    case [Point(0, y1), Point(0, y2)]:
        print(f"Two points on the Y axis at {y1}, {y2} are in the list.")
    case _:
        print("Something else is found in the list.")

```

## Complex patterns and the wildcard

To this point, the examples have used `_` alone in the last case statement. A wildcard can be used in more complex patterns, such as `('error', code, _)`. For example:

```

match test_variable:
    case ('warning', code, 40):
        print("A warning has been received.")
    case ('error', code, _):
        print(f"An error {code} occurred.")

```

In the above case, `test_variable` will match for `('error', code, 100)` and `('error', code, 800)`.

## Guard

We can add an `if` clause to a pattern, known as a "guard". If the guard is false, `match` goes on to try the next case block. Note that value capture happens before the guard is evaluated:

```

match point:
    case Point(x, y) if x == y:
        print(f"The point is located on the diagonal Y=X at {x}.")
    case Point(x, y):
        print(f"Point is not on the diagonal.")

```

## Other Key Features

Several other key features:

- Like unpacking assignments, tuple and list patterns have exactly the same meaning and actually match arbitrary sequences. Technically, the subject must be a sequence. Therefore, an important exception is that patterns don't match iterators. Also, to prevent a common mistake, sequence patterns don't match strings.
- Sequence patterns support wildcards: `[x, y, *rest]` and `(x, y, *rest)` work similar to wildcards in unpacking assignments. The name after `*` may also be `_`, so `(x, y, *_)` matches a sequence of at least two items without binding the remaining items.
- Mapping patterns: `{"bandwidth": b, "latency": l}` captures the "bandwidth" and "latency" values from a dict. Unlike sequence patterns, extra keys are ignored. A wildcard `**rest` is also supported. (But `**_` would be redundant, so is not allowed.)
- Subpatterns may be captured using the `as` keyword:

```

case (Point(x1, y1), Point(x2, y2) as p2): ...

```

This binds `x1`, `y1`, `x2`, `y2` like you would expect without the `as` clause, and `p2` to the entire second item of the subject.

- Most literals are compared by equality. However, the singletons `True`, `False` and `None` are compared by identity.
- Named constants may be used in patterns. These named constants must be dotted names to prevent the constant from being interpreted as a capture variable:

```

from enum import Enum
class Color(Enum):
    RED = 0
    GREEN = 1
    BLUE = 2

match color:
    case Color.RED:
        print("I see red!")
    case Color.GREEN:
        print("Grass is green")
    case Color.BLUE:
        print("I'm feeling the blues :)")

```

For the full specification see [PEP 634](#). Motivation and rationale are in [PEP 635](#), and a longer tutorial is in [PEP 636](#).

## Optional `EncodingWarning` and `encoding="locale"` option

The default encoding of `:class:`TextIOWrapper`` and `:func:`open`` is platform and locale dependent. Since UTF-8 is used on most Unix platforms, omitting `encoding` option when opening UTF-8 files (e.g. JSON, YAML, TOML, Markdown) is a very common bug. For example:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 689); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 689); [backlink](#)

Unknown interpreted text role "func".

```
# BUG: "rb" mode or encoding="utf-8" should be used.
with open("data.json") as f:
    data = json.load(f)
```

To find this type of bug, an optional `EncodingWarning` is added. It is emitted when `:data:`sys.flags.warn_default_encoding`` `<sys.flags>` is true and locale-specific default encoding is used.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 698); [backlink](#)

Unknown interpreted text role "data".

`-X warn_default_encoding` option and `:envvar:`PYTHONWARNDEFAULTENCODING`` are added to enable the warning.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 702); [backlink](#)

Unknown interpreted text role "envvar".

See [:ref:`io-text-encoding`](#) for more information.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 705); [backlink](#)

Unknown interpreted text role "ref".

## New Features Related to Type Hints

This section covers major changes affecting [PEP 484](#) type hints and the `:mod:`typing`` module.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 712); [backlink](#)

Unknown interpreted text role "mod".

### PEP 604: New Type Union Operator

A new type union operator was introduced which enables the syntax `X | Y`. This provides a cleaner way of expressing 'either type X or type Y' instead of using `:data:`typing.Union``, especially in type hints.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 719); [backlink](#)

Unknown interpreted text role "data".

In previous versions of Python, to apply a type hint for functions accepting arguments of multiple types, `:data:`typing.Union`` was used:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 723); [backlink](#)

Unknown interpreted text role "data".

```
def square(number: Union[int, float]) -> Union[int, float]:
```

```
return number ** 2
```

Type hints can now be written in a more succinct manner:

```
def square(number: int | float) -> int | float:  
    return number ** 2
```

This new syntax is also accepted as the second argument to `:func:`isinstance`` and `:func:`issubclass``:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 736); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 736); [backlink](#)

Unknown interpreted text role "func".

```
>>> isinstance(1, int | str)  
True
```

See [ref:`types-union`](#) and [PEP 604](#) for more details.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 742); [backlink](#)

Unknown interpreted text role "ref".

(Contributed by Maggie Moss and Philippe Prados in [issue:`41428`](#), with additions by Yuri Karabas and Serhiy Storchaka in [issue:`44490`](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 744); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 744); [backlink](#)

Unknown interpreted text role "issue".

## PEP 612: Parameter Specification Variables

Two new options to improve the information provided to static type checkers for [PEP 484](#)'s `Callable` have been added to the `mod:`typing`` module.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 751); [backlink](#)

Unknown interpreted text role "mod".

The first is the parameter specification variable. They are used to forward the parameter types of one callable to another callable -- a pattern commonly found in higher order functions and decorators. Examples of usage can be found in `:class:`typing.ParamSpec``. Previously, there was no easy way to type annotate dependency of parameter types in such a precise manner.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 754); [backlink](#)

Unknown interpreted text role "class".

The second option is the new `Concatenate` operator. It's used in conjunction with parameter specification variables to type annotate a higher order callable which adds or removes parameters of another callable. Examples of usage can be found in `:class:`typing.Concatenate``.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 760); [backlink](#)

Unknown interpreted text role "class".

See `:class:`typing.Callable``, `:class:`typing.ParamSpec``, `:class:`typing.Concatenate``, `:class:`typing.ParamSpecArgs``, `:class:`typing.ParamSpecKwargs``, and [PEP 612](#) for more details.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 765); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 765); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 765); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 765); [backlink](#)

Unknown interpreted text role "class".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 765); [backlink](#)

Unknown interpreted text role "class".

(Contributed by Ken Jin in [:issue:`41559`](#), with minor enhancements by Jelle Zijlstra in [:issue:`43783`](#). PEP written by Mark Mendoza.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 769); [backlink](#)

Unknown interpreted text role "issue".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 769); [backlink](#)

Unknown interpreted text role "issue".

## PEP 613: TypeAlias

[PEP 484](#) introduced the concept of type aliases, only requiring them to be top-level unannotated assignments. This simplicity sometimes made it difficult for type checkers to distinguish between type aliases and ordinary assignments, especially when forward references or invalid types were involved. Compare:

```
StrCache = 'Cache[str]' # a type alias
LOG_PREFIX = 'LOG[DEBUG]' # a module constant
```

Now the `:mod:`typing`` module has a special value `:data:`TypeAlias`` which lets you declare type aliases more explicitly:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 784); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew] 3.10.rst, line 784); [backlink](#)

Unknown interpreted text role "data".

```
StrCache: TypeAlias = 'Cache[str]' # a type alias
LOG_PREFIX = 'LOG[DEBUG]' # a module constant
```

See [PEP 613](#) for more details.

(Contributed by Mikhail Golubev in [:issue:`41923`](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 792); [backlink](#)

Unknown interpreted text role "issue".

## PEP 647: User-Defined Type Guards

[:data:`TypeGuard`](#) has been added to the [:mod:`typing`](#) module to annotate type guard functions and improve information provided to static type checkers during type narrowing. For more information, please see [:data:`TypeGuard`](#)'s documentation, and [PEP 647](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 797); [backlink](#)

Unknown interpreted text role "issue".

## **collections.abc**

The `__args__` of the `:ref:` parameterized generic `<types-genericalias>` for `:class:` `collections.abc.Callable` are now consistent with `:data:` `typing.Callable`. `:class:` `collections.abc.Callable` generic now flattens type parameters, similar to what `:data:` `typing.Callable` currently does. This means that `collections.abc.Callable[[int, str], str]` will have `__args__` of `(int, str, str)`; previously this was `([int, str], str)`. To allow this change, `:class:` `types.GenericAlias` can now be subclassed, and a subclass will be returned when subscripting the `:class:` `collections.abc.Callable` type. Note that a `:exc:` `TypeError` may be raised for invalid forms of parameterizing `:class:` `collections.abc.Callable` which may have passed silently in Python 3.9. (Contributed by Ken Jin in `:issue:` `42195`.)

Unknown interpreted text role "issue".

### Keyword-only fields

`dataclasses` now supports fields that are keyword-only in the generated `__init__` method. There are a number of ways of specifying keyword-only fields.

You can say that every field is keyword-only:

```
from dataclasses import dataclass

@dataclass(kw_only=True)
class Birthday:
    name: str
    birthday: datetime.date
```

Both `name` and `birthday` are keyword-only parameters to the generated `__init__` method.

You can specify keyword-only on a per-field basis:

```
from dataclasses import dataclass, field

@dataclass
class Birthday:
    name: str
    birthday: datetime.date = field(kw_only=True)
```

Here only `birthday` is keyword-only. If you set `kw_only` on individual fields, be aware that there are rules about re-ordering fields due to keyword-only fields needing to follow non-keyword-only fields. See the full `dataclasses` documentation for details.

You can also specify that all fields following a `KW_ONLY` marker are keyword-only. This will probably be the most common usage:

```
from dataclasses import dataclass, KW_ONLY

@dataclass
class Point:
    x: float
    y: float
    _: KW_ONLY
    z: float = 0.0
    t: float = 0.0
```

Here, `z` and `t` are keyword-only parameters, while `x` and `y` are not. (Contributed by Eric V. Smith in :issue:`43532`)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]3.10.rst, line 1049); [backlink](#)

Unknown interpreted text role "issue".

## distutils

The entire `distutils` package is deprecated, to be removed in Python 3.12. Its functionality for specifying package builds has already been completely replaced by third-party packages `setuptools` and `packaging`, and most other commonly used APIs are available elsewhere in the standard library (such as `mod:`platform``, `mod:`shutil``, `mod:`subprocess`` or `mod:`sysconfig``). There are no plans to migrate any other functionality from `distutils`, and applications that are using other functions should plan to make private copies of the code. Refer to [PEP 632](#) for discussion.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew]3.10.rst, line 1058); [backlink](#)

The changes above were backported to a 3.9 maintenance release.

Add a Shell sidebar. Move the primary prompt ('>>>') to the sidebar. Add secondary prompts ('...') to the sidebar. Left click and optional drag selects one or more lines of text, as with the editor line number sidebar. Right click after selecting text lines displays a context menu with 'copy with prompts'. This zips together prompts from the sidebar with lines from the selected text. This option also appears on the context menu for the text. (Contributed by Tal Einat in [:issue:'37903'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1164); [backlink](#)

Unknown interpreted text role "issue".

Use spaces instead of tabs to indent interactive code. This makes interactive code entries 'look right'. Making this feasible was a major motivation for adding the shell sidebar. (Contributed by Terry Jan Reedy in [:issue:'37892'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1173); [backlink](#)

Unknown interpreted text role "issue".

Highlight the new `ref:soft keywords <soft-keywords>`keyword:`match`, `keyword:`case <match>`, and `keyword:`_ <wildcard-patterns>`` in pattern-matching statements. However, this highlighting is not perfect and will be incorrect in some rare cases, including some `_s` in `case` patterns. (Contributed by Tal Einat in [:issue:'44010'](#).)

## inspect

When a module does not define `__loader__`, fall back to `__spec__.loader`. (Contributed by Brett Cannon in [:issue:`42133`](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1208); [backlink](#)

Unknown interpreted text role "issue".

Add `:func:`inspect.get_annotations``, which safely computes the annotations defined on an object. It works around the quirks of accessing the annotations on various types of objects, and makes very few assumptions about the object it examines.

`:func:`inspect.get_annotations`` can also correctly un-stringize stringized annotations. `:func:`inspect.get_annotations`` is now considered best practice for accessing the annotations dict defined on any Python object; for more information on best practices for working with annotations, please see `:ref:`annotations-howto``. Relatedly, `:func:`inspect.signature``, `:func:`inspect.Signature.from_callable``, and `:func:`inspect.Signature.from_function`` now call `:func:`inspect.get_annotations`` to retrieve annotations. This means `:func:`inspect.signature`` and `:func:`inspect.Signature.from_callable`` can also now un-stringize stringized annotations. (Contributed by Larry Hastings in [:issue:`43817`](#).)

## typing

For major changes, see [:ref:`new-feat-related-type-hints`](#).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1443); [backlink](#)

Unknown interpreted text role "ref".

The behavior of `:class:`typing.Literal`` was changed to conform with [PEP 586](#) and to match the behavior of static type checkers specified in the PEP.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1445); [backlink](#)

Unknown interpreted text role "class".

1. `Literal` now de-duplicates parameters.
2. Equality comparisons between `Literal` objects are now order independent.
3. `Literal` comparisons now respect types. For example, `Literal[0] == Literal[False]` previously evaluated to `True`. It is now `False`. To support this change, the internally used type cache now supports differentiating types.

4. `Literal` objects will now raise a `:exc:`TypeError`` exception during equality comparisons if any of their parameters are not `:term:`hashable``. Note that declaring `Literal` with unhashable parameters will not throw an error:

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\[cpython-main] [Doc] [whatsnew]3.10.rst, line 1454); [backlink](#)

Unknown interpreted text role "exc".

Unknown interpreted text role "issue".

- When using stringized annotations, annotations dicts for functions are no longer created when the function is created. Instead, they are stored as a tuple of strings, and the function object lazily converts this into the annotations dict on demand. This optimization cuts the CPU time needed to define an annotated function by half. (Contributed by Yuri Karabas and Inada Naoki in [issue: '42202'](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1558); [backlink](#)

Unknown interpreted text role "issue".

- Substring search functions such as `str1 in str2` and `str2.find(str1)` now sometimes use Crochemore & Perrin's

"Two-Way" string searching algorithm to avoid quadratic behavior on long strings. (Contributed by Dennis Sweeney in [:issue:'41972'](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1565); [backlink](#)

Unknown interpreted text role "issue".

- Add micro-optimizations to `_PyType_Lookup()` to improve type attribute cache lookup performance in the common case of cache hits. This makes the interpreter 1.04 times faster on average. (Contributed by Dino Viehland in [:issue:'43452'](#))

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1570); [backlink](#)

Unknown interpreted text role "issue".

- The following built-in functions now support the faster [PEP 590](#) vectorcall calling convention: `:func:'map'`, `:func:'filter'`, `:func:'reversed'`, `:func:'bool'` and `:func:'float'`. (Contributed by Dong-hee Na and Jeroen Demeyer in [:issue:'43575'](#), [:issue:'43287'](#), [:issue:'41922'](#), [:issue:'41873'](#) and [:issue:'41870'](#))

## Deprecated

- Currently Python accepts numeric literals immediately followed by keywords, for example `0in x, 1or x, 0if 1else 2`. It allows confusing and ambiguous expressions like `[0x1for x in y]` (which can be interpreted as `[0x1 for x in y]` or `[0x1f or x in y]`). Starting in this release, a deprecation warning is raised if the numeric literal is immediately followed by one of keywords `:keyword:'and'`, `:keyword:'else'`, `:keyword:'for'`, `:keyword:'if'`, `:keyword:'in'`, `:keyword:'is'` and `:keyword:'or'`. In future releases it will be changed to syntax warning, and finally to syntax error. (Contributed by Serhiy Storchaka in `:issue:'43833'`).

- Starting in this release, there will be a concerted effort to begin cleaning up old import semantics that were kept for Python 2.7 compatibility. Specifically, `meth:~importlib.abc.PathEntryFinder.find_loader`/`meth:~importlib.abc.Finder.find_module` (superseded by `meth:~importlib.abc.Finder.find_spec`), `meth:~importlib.abc.Loader.load_module` (superseded by `meth:~importlib.abc.Loader.exec_module`), `meth:~importlib.abc.Loader.module_repr` (which the import system takes care of for you), the `__package__` attribute (superseded by `__spec__.parent`), the `__loader__` attribute (superseded by `__spec__.loader`), and the `__cached__` attribute (superseded by `__spec__.cached`) will slowly be removed (as well as other classes and methods in `mod:importlib`). `exc:ImportWarning` and/or `exc:DeprecationWarning` will be raised as appropriate to help identify code which needs updating during this transition.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1599); [backlink](#)

Unknown interpreted text role "doc".

1. This simplifies the high-level API.
2. The functions in the high-level API have been implicitly getting the current thread's running event loop since Python 3.7. There isn't a need to pass the event loop to the API in most normal use cases.
3. Event loop passing is error-prone especially when dealing with loops running in different threads.

Note that the low-level API will still accept `loop`. See [ref: changes-python-api](#) for examples of how to replace existing code.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1845); [backlink](#)

Unknown interpreted text role "issue".

## Porting to Python 3.10

This section lists previously described changes and other bugfixes that may require changes to your code.

### Changes in the Python syntax

- Deprecation warning is now emitted when compiling previously valid syntax if the numeric literal is immediately followed by a keyword (like in `0in x`). In future releases it will be changed to syntax warning, and finally to a syntax error. To get rid of the warning and make the code compatible with future releases just add a space between the numeric literal and the following

keyword. (Contributed by Serhiy Storchaka in [issue:43833](#)).

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1862); [backlink](#)

Unknown interpreted text role "issue".

## Changes in the Python API

- The `etype` parameters of the `:func:~traceback.format_exception`, `:func:~traceback.format_exception_only`, and `:func:~traceback.print_exception` functions in the `:mod:traceback` module have been renamed to `exc`. (Contributed by Zackery Spytz and Matthias Bussonnier in [issue:26389](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1875); [backlink](#)

Unknown interpreted text role "issue".

- `:class:'collections.abc.Callable'` generic now flattens type parameters, similar to what `:data:'typing.Callable'` currently does. This means that `collections.abc.Callable[[int, str], str]` will have `__args__` of `(int, str, str)`; previously this was `([int, str], str)`. Code which accesses the arguments via `:func:'typing.get_args'` or `__args__` need to account for this change. Furthermore, `:exc:'TypeError'` may be raised for invalid forms of parameterizing `:class:'collections.abc.Callable'` which may have passed silently in Python 3.9. (Contributed by Ken Jin in [:issue:'42195'](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1902);**  
[backlink](#)

Unknown interpreted text role "doc".

A coroutine that currently looks like this:

```
async def foo(loop):  
    await asyncio.sleep(1, loop=loop)
```

Should be replaced with this:

```
async def foo():  
    await asyncio.sleep(1)
```

If `foo()` was specifically designed *not* to run in the current thread's running event loop (e.g. running in another thread's event loop), consider using `:func:`asyncio.run_coroutine_threadsafe`` instead.

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1916);**  
[backlink](#)

Unknown interpreted text role "func".

(Contributed by Yuri Karabas, Andrew Svetlov, Yury Selivanov and Kyle Stanley in `:issue:`42392``.)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1920);**  
[backlink](#)

Unknown interpreted text role "issue".

- The `:data:`types.FunctionType`` constructor now inherits the current builtins if the `globals` dictionary has no `"__builtins__"` key, rather than using `{ "None": None }` as builtins: same behavior as `:func:`eval`` and `:func:`exec`` functions. Defining a function with `def function(...): ...` in Python is not affected, `globals` cannot be overridden with this syntax: it also inherits the current builtins. (Contributed by Victor Stinner in `:issue:`42990``.)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1923);**

[backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1923); [backlink](#)

Unknown interpreted text role "func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1923); [backlink](#)

Unknown interpreted text role "issue".

## Changes in the C API

- The C API functions `PyParser_SimpleParseStringFlags`, `PyParser_SimpleParseStringFlagsFilename`, `PyParser_SimpleParseFileFlags`, `PyNode_Compile` and the type used by these functions, `struct _node`, were removed due to the switch to the new PEG parser.

Source should now be compiled directly to a code object using, for example, `:c:func:'Py_CompileString'`. The resulting code object can then be evaluated using, for example, `:c:func:'PyEval_EvalCode'`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1940); [backlink](#)

Unknown interpreted text role "c:func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1940); [backlink](#)

Unknown interpreted text role "c:func".

Specifically:

- A call to `PyParser_SimpleParseStringFlags` followed by `PyNode_Compile` can be replaced by calling `:c:func:'Py_CompileString'`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1946); [backlink](#)

Unknown interpreted text role "c:func".

- There is no direct replacement for `PyParser_SimpleParseFileFlags`. To compile code from a `FILE *` argument, you will need to read the file in C and pass the resulting buffer to `:c:func:'Py_CompileString'`.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1949); [backlink](#)

Unknown interpreted text role "c:func".

- To compile a file given a `char * filename`, explicitly open the file, read it and compile the result. One way to do this is using the `:py:mod:'io'` module with `:c:func:'PyImport_ImportModule'`, `:c:func:'PyObject_CallMethod'`, `:c:func:'PyBytes_AsString'` and `:c:func:'Py_CompileString'`, as sketched below. (Declarations and error handling are omitted.)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1953); [backlink](#)

Unknown interpreted text role "py:mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1953); [backlink](#)

Unknown interpreted text role "c:func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1953); [backlink](#)

Unknown interpreted text role "c:func".

Unknown interpreted text role "c:func".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1953); [backlink](#)

Unknown interpreted text role "c:func".

```
io_module = Import_ImportModule("io");
fileobject = PyObject_CallMethod(io_module, "open", "ss", filename, "rb");
source_bytes_object = PyObject_CallMethod(fileobject, "read", "");
result = PyObject_CallMethod(fileobject, "close", "");
source_buf = PyBytes_AsString(source_bytes_object);
code = Py_CompileString(source_buf, filename, Py_file_input);
```

- For `FrameObject` objects, the `f_lasti` member now represents a wordcode offset instead of a simple offset into the bytecode string. This means that this number needs to be multiplied by 2 to be used with APIs that expect a byte offset instead (like `c:func:PyCode_Addr2Line` for example). Notice as well that the `f_lasti` member of `FrameObject` objects is not considered stable: please use `c:func:PyFrame_GetLineNumber` instead.

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 1966); [backlink](#)

Unknown interpreted text role "issue".

- Remove the `PyAST_Validate()` function. It is no longer possible to build a AST object (`mod_ty` type) with the public C API. The function was already excluded from the limited C API ([PEP 384](#)). (Contributed by Victor Stinner in [issue:43244](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2255); [backlink](#)

Unknown interpreted text role "issue".

- Remove the `symtable.h` header file and the undocumented functions:

- `PyST_GetScope()`
- `PySymtable_Build()`
- `PySymtable_BuildObject()`
- `PySymtable_Free()`
- `Py_SymtableString()`
- `Py_SymtableStringObject()`

The `Py_SymtableString()` function was part the stable ABI by mistake but it could not be used, because the `symtable.h` header file was excluded from the limited C API.

Use Python `mod:symtable` module instead. (Contributed by Victor Stinner in [issue:43244](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2273); [backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2273); [backlink](#)

Unknown interpreted text role "issue".

- Remove `c:\func\PyOS_ReadlineFunctionPointer` from the limited C API headers and from `python3.dll`, the library that provides the stable ABI on Windows. Since the function takes a `FILE*` argument, its ABI stability cannot be guaranteed. (Contributed by Petr Viktorin in [issue: 43868](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2276);**  
[backlink](#)

Unknown interpreted text role "c:func".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2276);**  
[backlink](#)

Unknown interpreted text role "issue".

- Remove `ast.h`, `asdl.h`, and `Python-ast.h` header files. These functions were undocumented and excluded from the limited C API. Most names defined by these header files were not prefixed by `Py` and so could create names conflicts. For example, `Python-ast.h` defined a `Yield` macro which was conflict with the `Yield` name used by the Windows `<winbase.h>` header. Use the Python `mod: ast` module instead. (Contributed by Victor Stinner in [issue: 43244](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2282);**  
[backlink](#)

Unknown interpreted text role "mod".

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2282);**  
[backlink](#)

Unknown interpreted text role "issue".

- Remove the compiler and parser functions using `struct _mod` type, because the public AST C API was removed:
  - `PyAST_Compile()`
  - `PyAST_CompileEx()`
  - `PyAST_CompileObject()`
  - `PyFuture_FromAST()`
  - `PyFuture_FromASTObject()`
  - `PyParser_ASTFromFile()`
  - `PyParser_ASTFromFileObject()`
  - `PyParser_ASTFromFilename()`
  - `PyParser_ASTFromString()`
  - `PyParser_ASTFromStringObject()`

These functions were undocumented and excluded from the limited C API. (Contributed by Victor Stinner in [issue: 43244](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2304);**  
[backlink](#)

Unknown interpreted text role "issue".

- Remove the `pyarena.h` header file with functions:
  - `PyArena_New()`
  - `PyArena_Free()`
  - `PyArena_Malloc()`
  - `PyArena_AddPyObject()`

These functions were undocumented, excluded from the limited C API, and were only used internally by the compiler. (Contributed by Victor Stinner in [issue: 43244](#).)

**System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2314);**  
[backlink](#)

Unknown interpreted text role "issue".

- The `PyThreadState.use_tracing` member has been removed to optimize Python. (Contributed by Mark Shannon in [issue: '43760'](#).)

**System Message: ERROR/3** (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\whatsnew\ [cpython-main] [Doc] [whatsnew] 3.10.rst, line 2318); [backlink](#)

Unknown interpreted text role "issue".
