

This directory is deprecated!

Log dumping utility was ported from `kubernetes/kubernetes` repository to `kubernetes/test-infra`. If you require changes to this script, please consider migrating your jobs to use the new log dumping mechanism first.

Currently, `log-dump.sh` file is added to every newly released `kubekins-e2e` image. In order to leverage that script, add `USE_TEST_INFRA_LOG_DUMPING` environment variable to your test job and set its value to `true`.

Migration steps

For the time being, only GCE and GKE providers are supported by the log-dump mechanism. To make the mechanism support your Kubernetes provider in tests using `kubekins-e2e`, modify the `logDumpPath` function in `kubetest` to handle your provider and adapt `log-dump.sh` in accord to your needs.
