

Next.js example with `graphql-react`

`graphql-react` is a [GraphQL](#) client for [React](#) using modern [context](#) and [hooks](#) APIs that is lightweight (< 3 KB [size limited](#)) but powerful; the first [Relay](#) and [Apollo](#) alternative with server side rendering.

Deploy your own

Deploy the example using [Vercel](#):

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-graphql-react with-graphql-react-app
# or
yarn create next-app --example with-graphql-react with-graphql-react-app
# or
pnpm create next-app -- --example with-graphql-react with-graphql-react-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).

Notes

- In `pages/_app.js` a [custom App component](#) is decorated with the [withGraphQLApp higher-order component](#) from [next-graphql-react](#), generating a `graphql` prop that populates the [GraphQLProvider](#) component from [graphql-react](#).
- In `pages/index.js` the [useGraphQL](#) React hook from [graphql-react](#) is used to query the [GraphQL Pokémon API](#) and show a picture of Pikachu.
