

libopencl-stub

A stub opecl library that dynamically dlopen/dlsyms opencl implementations at runtime based on environment variables. Will be useful when opencl implementations are installed in non-standard paths (say pocl on android)

LIBOPENCL_SO_PATH -- Path to opencl so that will be searched first

LIBOPENCL_SO_PATH_2 -- Searched second

LIBOPENCL_SO_PATH_3 -- Searched third

LIBOPENCL_SO_PATH_4 -- Searched fourth

Default paths will be searched otherwise
