

Dnote Plugin

This plugin adds auto-completion for [Dnote](#) project.

To use it, add `dnote` to the plugins array in your zshrc file:

```
plugins=(dnote)
```

Usage

At the basic level, this plugin completes all Dnote commands.

```
$ dnote a (press <TAB> here)
```

would result in:

```
$ dnote add
```

For some commands, this plugin dynamically suggests matching book names.

For instance, if you have three books that begin with 'j': 'javascript', 'job', 'js',

```
$ dnote view j (press <TAB> here)
```

would result in:

```
$ dnote v j
javascript  job      js
```

As another example,

```
$ dnote edit ja (press <TAB> here)
```

would result in:

```
$ dnote v javascript
```
