

Here are the most significant improvements in September:

- 📌 Add `startIcon` and `endIcon` props for the button. It makes it simpler to append an icon:

 button icons

```
import DeleteIcon from '@mui/icons-material/Delete';

<Button startIcon={<DeleteIcon />}>Delete</Button>;
```

- 🔑 Add support for Chrome autofill. The `InputBase` component detects Chrome autofill events and updates the label position accordingly.

 Autofill

- 📊 Launch a [developer survey](#) as a precursor to a major Date Picker enhancement effort. We plan a new investment batch of between 100 and 500 hours.
- 📦 Change imports from `@mui/styles` to `@mui/material/styles`

The presence of two almost identical import paths has been a source of confusion: `@mui/styles` and `@mui/material/styles`. Starting with v4.5.1, the documentation mentions `@mui/material/styles` as much as possible.

```
-import { makeStyles } from '@mui/styles';
+import { makeStyles } from '@mui/material/styles';
```

This change removes the need to install the `@mui/styles` package directly. It prevents the duplication of `@mui/styles` in bundles and avoids confusion. You can [learn more about the difference](#) in the documentation.

But this summary is just scratching the surface. We have accepted 199 commits from 61 different contributors. We have changed 1,219 files with 18,223 additions and 11,957 deletions.

## Our roadmap intent for October

*(We'll do our best, no guarantee!)*

- 🔍 We will provide a ready-to-use autocomplete, combo box, and multi-select components in the lab. You can already [preview it](#).

 combobox

Combo box (limited options)

 multiselect

Multi-select

#### Autocomplete (free options)

- 📅 We will start to work on a [major upgrade](#) of the date/time picker components.
- 📊 We will start to work on a Data Table component. ★ Notice that the advanced features of the data grid will be paid, behind an enterprise subscription. This is an effort part of [our roadmap](#) to answer enterprise needs.
- ? Please upvote our [GitHub issues](#) if you want something specific. The number of 👍 helps us to prioritize.
